Summary

QA Engineer who has written over 500 test cases and found more than 100 bugs across manual and automated testing efforts, with hands-on experience in enterprise and financial applications, including a platform used to manage client payments and project costs. Skilled in manual and automated testing (Python, Selenium, Pytest), API testing with Postman, and SQL for backend validation. Focused on catching problems early and writing clear, actionable bug reports developers can act on immediately.

Technical Skills

Manual Testing, Mobile Testing, API Testing, Postman, SQL, Test Case Design, Regression Testing, Functional Testing, Boundary Value Analysis, Equivalence Partitioning, Python, Java, Pytest, Selenium, WebDriverIO, JavaScript, Test Automation Frameworks, Git, GitHub Actions, CI/CD, Agile, Jira, Chrome DevTools, JSON, Bash, Charles, Android Studio

Professional Experience

Manual QA Test Engineer, Experts Remodel, Rockville, MD Mar 2024 to Jan 2026

- Performed functional testing on the company's financial platform used by clients to manage payments and project costs, validating calculations and transaction accuracy before changes reach production.
- Caught a bug in the CRM system that was failing to update invoice payment dates, a defect that would have affected tens of thousands of invoices, preventing inaccurate payment records from reaching clients.
- Identified a bug on a key page during regression testing after a website update where clicking certain elements caused the site to crash, flagging it for a fix before release.
- Worked as part of a team testing the CRM system to ensure it was user-friendly for both end users and managers.
- Executed functional and regression testing on internal project management software, identifying and reporting bugs ahead of feature releases.
- Conducted functional and usability testing on company websites to identify UI and workflow issues.

QA Technical Projects

Urban Lunch Mobile App: Manual & Functional Testing (Android)

View project on GitHub

Skills: Manual Testing, Mobile Testing, Android Emulator, Requirement Analysis, Jira

- Wrote a 44-case test checklist based on documented product requirements and Figma layouts, prioritizing the highlighted requirement areas.
- Installed and tested the app in an Android emulator (Pixel 5), covering key user flows end to end.
- Found and logged 5 bugs in Jira with reproduction steps, each linked to its corresponding test case.
- Marked each test case as passed or failed in a structured test spreadsheet, tracking results for the team.

Urban Grocers API: API Testing & Validation

View project on GitHub

Skills: API Testing, Postman, JSON, Test Case Design, Jira

- Wrote and executed 61 API test cases across two endpoints (kits/products and fast delivery), based on documented requirements.
- Applied boundary value analysis and equivalence partitioning in Postman to validate responses, status codes, and data accuracy.
- Found and logged 32 bugs in Jira with full request and response data to support debugging.

Urban Routes: Automation & Manual Test Design

View project on GitHub

Skills: Python, Pytest, Test Automation, Requirement Analysis, Equivalence Partitioning, Boundary Value Analysis, Git, GitHub Actions, CI/CD, Chrome DevTools

- Built a test automation framework using Python and Pytest, cutting manual test run time by roughly 80% for the covered workflows, with reusable functions and separated test data for scalability.
- Configured a GitHub Actions CI pipeline to run dependency installs, lint checks, and test collection on every push.
- Converted requirements into detailed test conditions and designed test cases using equivalence partitioning and boundary value analysis.
- Executed tests in a live environment using Chrome DevTools, testing carsharing and Aero Taxi features and identifying functional gaps.

Education

Bachelor's Degree, Information Technology, Montgomery College, 2024

QA Engineering Certificate, TripleTen, 2026

Coursework: manual and automated testing, API testing with Postman, SQL, CI/CD
